

INTRODUCING A REVOLUTIONARY STEERING REPAIR OPTION

Electric power steering (EPS) has become standard in most modern vehicles, providing improvements in fuel efficiency and responsiveness. However, when these electronically assisted racks fail, replacement costs have traditionally been extremely high - often \$1000 or more for a whole new rack. Why? Unlike previously conventional hydraulic systems, electric racks aren't readily available and lacked repair options...until now.

Plews & Edelmann® is proud to introduce the game-changing Edelmann® Electronic Rack and Pinion Drive Belt Replacement Kit - the first-ever repair solution for worn electric power steering drive belts. Inside most electric racks is a rubber belt connecting the electric assist motor to the steering gear. When this belt wears out or breaks, steering reverts to difficult manual mode. The only fix has been complete rack replacement...until this revolutionary new repair option.

The Edelmann Repair Advantage:

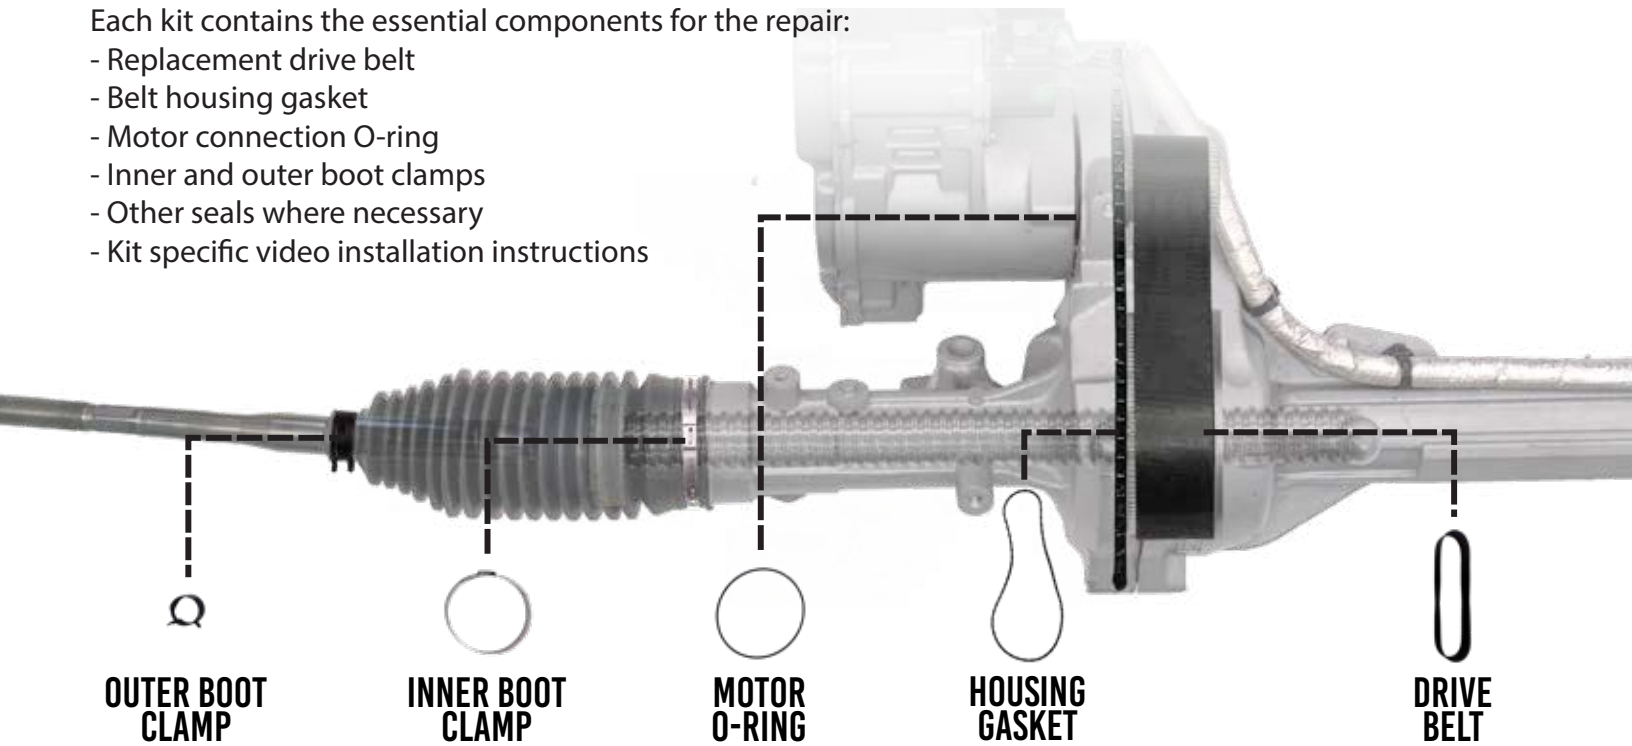

- 50%+ cost savings over full rack replacement
- Simple installation with common tools
- No programming or alignment needed after repair
- OE-quality components ensure perfect fit and function
- Covers a wide range of late model domestic applications
- Vehicle specific installation instructional videos to assist repair

By enabling repair for a common failure point, the Edelmann EPS kit eliminates the need for expensive rack replacements when only a belt is worn. Where full racks are scarce, it also provides a critical service option providing an opportunity to get the vehicle back on the road. And with DIY-friendly video instructions, the repair can be performed easily using everyday tools.

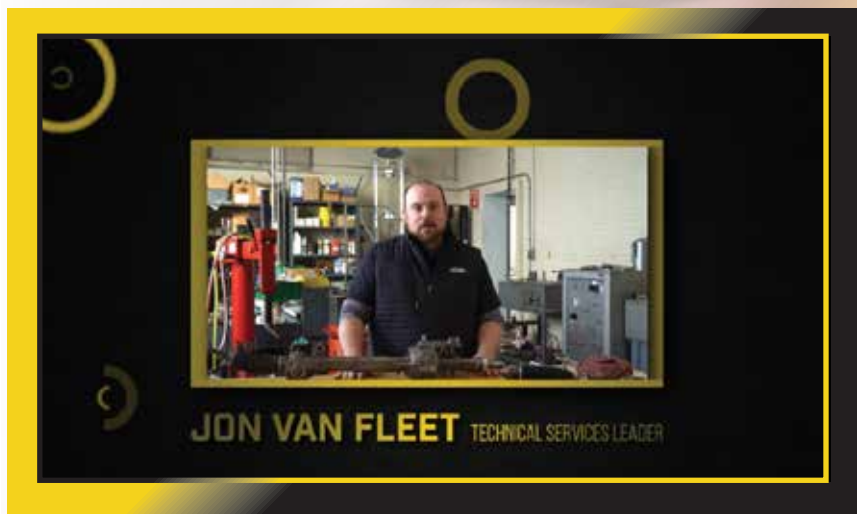

Each kit contains the essential components for the repair:

- Replacement drive belt
- Belt housing gasket
- Motor connection O-ring
- Inner and outer boot clamps
- Other seals where necessary
- Kit specific video installation instructions

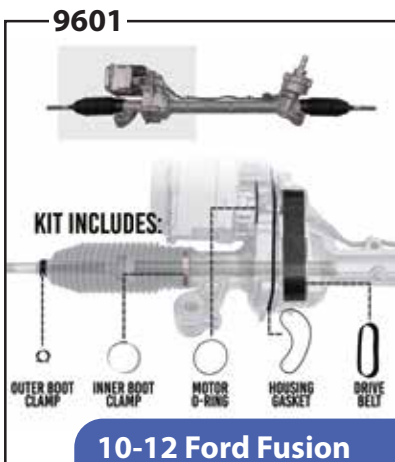

The Edelmann Electronic Rack and Pinion Drive Belt Replacement Kit - an innovative new solution providing convenience and cost savings, eliminating rack replacements for just a worn belt.

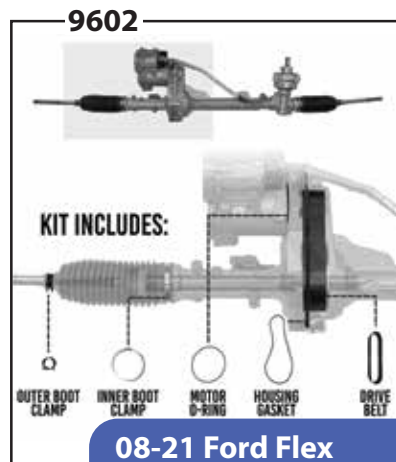

Watch as our Technical Services Leader, Jon Van Fleet, demonstrates just how easy it is to check the belt:

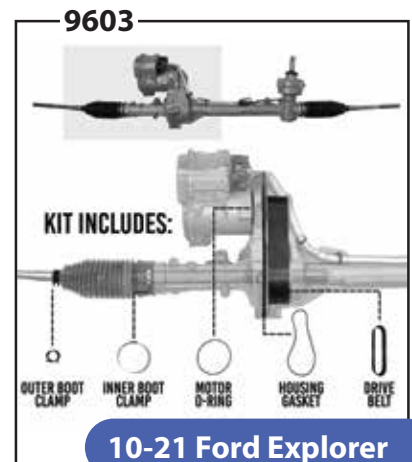

Coverage ready for the following applications:

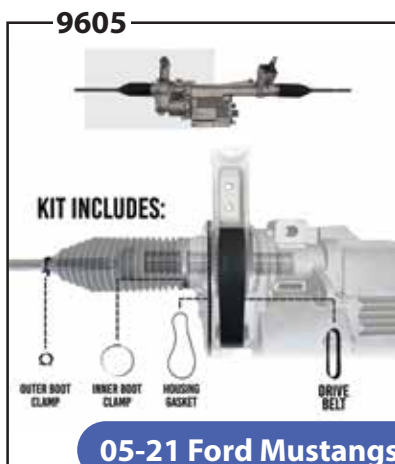

**10-12 Ford Fusion
10-11 Mercury Milan**

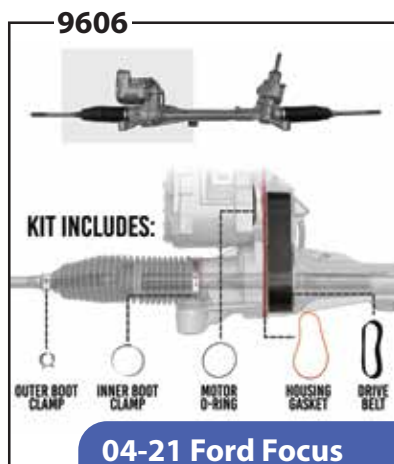

**08-21 Ford Flex
09-21 Ford Taurus
08-21 Lincoln MKS
09-21 Lincoln MKT
